Additional delegates can be added to training classes; however, any number, over and above 12 will attract a US\$1,000 fee per course

† Selected Package will determine the total cost of the package. For a full range of the LSES retainer / rental packages please visit: www.lamorswire.com/ens.html

® Exclusive of all personnel costs i.e. time, flights, accommodation, sundries; which will be charged at published rates

All of the above is subject to change without notice, is governed by LSES's full contractual terms and conditions and subject to Board Approval; for this and further information please email: info@lamorswire.com

Notes on the LSES Tiered Retainer Plan Summary

The notes below are set out to provide additional details for some of the broader services which LSES offer in the Tier Retainer Plan.

The 24 / 7 Call Centre

LSES operates a dedicated 24 / 7 telephone line, which can be called at anytime of day and night with a guaranteed answer. In an emergency, when you need a rapid, proactive response, to have a qualified oil spill response consultant on the other end of the line could prove to be invaluable. What's more, through the call centre number LSES will be able to mobilise whichever part of the response team is needed to ensure that the response is as focussed and as rapid as possible.

The LSES Tier 3 Centre

LSES Operates an oil spill response base of Tier 3 sized proportions in Jebel Ali, Dubai. It has a full range of booms, skimmers, dispersant, storage solutions and ancillaries which are able to be used in all types of oil spill. All paid members of the LSES Retainer scheme will have full access to this stockpile and can advise what equipment they are most likely to require in case of emergency and, if it is not in stock, what type of equipment they would like to see LSES purchase.

Reviews of oil spill response contingency plan

LSES has trained experts, able to review your company's oil spill response contingency plan. The levels of detail of this review process increase according to the level of retainer which you sign up for. The basic level (in the Bronze Tier) will cover: risk review for a specific site, equipment evaluation, training requirements and future needs. The Silver – Platinum levels will provide wider context and an overarching strategy plan.

The Notification Exercise

All companies need to practice their emergency response. Regular drills are often planned but more often than not the element of surprise has been taken out of them. LSES can work with you to organise a "real life" notification drill; testing all of the immediate response procedures that your company will require to go through. Using a third party to initiate the drill will provide objective and real results with how your staff will react and cope with a situation that LSES will prepare.

Observation at an Exercise

In a similar fashion to the Notification Exercise (above), LSES can attend your company's full, annual emergency response exercise and either become embedded with your staff assisting where necessary; or act as a third party auditor, providing expert feedback on all areas of the simulation.

Bespoke Oil Spill Response Exercises

LSES has operated in the full range of oil spill response call outs: from salvages to well blow outs and from ship spills to mystery spiller beach clean ups. LSES will provide your company with a suitable oil spill scenario which will challenge and test your staff's response; bringing in all elements of the Incident Management System: Logistics, Planning, Operations and Finance & Administration (if necessary).
